THE LAST PANEL

2-PAGE GAME PROPOSAL • Logic_Ai

COMIC	TWIST	LIGHT
A mystery unfolds inside a living comic book through panels, dialogue and visual storytelling.	Contradictory clues and changing panels make the player question what the story is telling them.	Different light types reveal clues, memories and contradictions hidden in the comic world.

1. GAME CONCEPT

The Last Panel is a 10–15 minute mystery experience set inside a dark, interactive comic book. The player explores locations, uses different lights to uncover hidden information, investigates the disappearance of Mira, and gradually discovers that the comic itself cannot be trusted. Evidence, memories and panels begin to contradict one another until the player reaches the final investigation and discovers their connection to the story.

2. CORE GAMEPLAY LOOP

Explore → Use Light → Reveal → Investigate → Compare Evidence → Discover Contradiction → Advance the Story

Explore	Move through the comic world and inspect important locations.
Reveal	Use light to expose information that is not visible normally.
Investigate	Inspect objects and collect clues connected to Mira.
Compare	Use evidence and memories to notice contradictions.
Twist	The comic itself begins changing, affecting clues, dialogue and panels.

3. LIGHT MECHANICS

White Light reveals ordinary clues. **Violet Light** reveals memories. **Golden Light** reveals contradictions. Together, the three light types turn the required Light theme into an active investigation mechanic rather than only a visual effect.

4. STORY / TWIST STRUCTURE

The opening introduces the blackout and missing-Mira mystery. As the player investigates, evidence and memories begin to disagree. Later, the player discovers that the comic itself is changing: panels, dialogue and clues can behave differently. The final chapter connects the player directly to the story and ends on the final panel.

5. DEVELOPMENT TARGET

A complete, stable 10–15 minute gameplay loop with a playable HTML5/WebGL build, public GitHub repository, README, credits/asset licensing information, AI disclosure and submission-ready package.

THE LAST PANEL

7. 96-HOUR DEVELOPMENT PLAN

Hours	Phase	Deliverable / Game State
0–3	Project Setup	Clean project, scenes, folders, GitHub and basic systems ready.
3–9	Movement + Light Prototype	Player movement and first Explore → Light → Reveal loop.
9–12	POC + Scope Lock	First playable mystery slice; final scope locked.
12–18	Interaction Systems	Inspect objects, interact with environment and collect Mira clues.
18–24	Three Light Types	White = clues; Violet = memories; Golden = contradictions.
24–36	Chapter 1 + Comic System	Panels, dialogue and opening blackout/missing-Mira mystery.
36–54	Chapters 2–3	More locations, evidence and contradictory memories.
54–66	Contradictions + Twist	Comic panels, clues and dialogue can behave differently.
66–78	Final Chapter + Ending	Final investigation, player/story connection and final-panel ending.
78–90	Polish + Complete Loop	Full playthrough; visuals, audio, transitions and feedback polished.
90–96	QA + Submission	Bug fixes, final build, GitHub, README, credits and itch.io submission.

8. SUBMISSION CHECKLIST

- Complete 10–15 minute gameplay loop
- Public HTML5/WebGL itch.io build
- Public GitHub repository
- README with controls and team details
- CREDITS.md with asset sources/licenses
- AI disclosure
- Only permitted assets/tools used

9. SCHEDULE

Development start: 3 October 2026, 12:00 PM **Development deadline:** 7 October 2026, 12:00 PM. From Hour 84 onward, focus on stability, polish, testing and submission; at Hour 96 the code is frozen and the final public build is submitted.
